

First RESET Air Certified Cathedral in the World

Historic Church Uses Technology to Reduce Energy and Carbon

East Liberty Presbyterian Church (ELPC) Pittsburgh, PA

ELPC's first-ever comprehensive renovation, consisting of increasing usable space in the building while reducing energy and dramatically improving indoor air quality.

Owner's Project Goals

ELPC raised \$6 million for the renovation with the objective to get as much building performance as possible while reducing long-term operating costs. Using AUROS360™ technology, the church targeted a 30% reduction in EnergyUse Intensity and improved thermal comfort.

Metrics

- 30% or greater reduction in EUI
- Particulate Matter 2.5 (PM2.5): < 12 µg/m³
- Particulate Matter 10 (PM10): < 50 µg/m³
- Total Volatile Organic Compound (TVOC): < 400 µg/m³
- Carbon Dioxide (CO₂): < 600 ppm

Sustainability Programs

- Passive House strategies
- RESET Air certification

Project Highlights

As Owner's Performance Advocates, AUROS Group used Owner's Project Requirements (OPR) to align all team members to performance metrics. Using whole building performance simulations, smart building infrastructure and an integrated performance dashboard, ELPC knew the impacts of their investments before spending one dollar in construction costs.

- 30% energy reduction from 83.6 EUI to 58.6 EUI
- First cathedral in the world to achieve RESET Air Certification
- 35% improvement in church space utilization with improved indoor environmental quality
- Open integration, smart building infrastructure
- Recognized by World GBC as a building of excellence
